

Third-Party Data Sharing and Tracking on Norwegian Websites

Humna Akhtar, Mithun Chandra Debnath, Karina Sætersdal Nilssen, and Sumit Prasad Sah

Department of Computer Science, Oslo Metropolitan University

ACIT4280 Privacy by Design

Group Assignment 1A

3 September 2026

Introduction

This report has two parts. Part 1 uses Webbkoll to measure cookies, third-party requests and server location on 18 Norwegian-facing websites in shopping, government, news and media, and sport. Part 2 uses the ICO lawful basis tool on five of those sites: skatteetaten.no, netflix.no, fotball.no, document.no and babyshop.no.

The General Data Protection Regulation (GDPR) sets the rules for personal data in the EEA (General Data Protection Regulation, 2016). Processing is lawful only if at least one Article 6 basis applies. The bases used here are legal obligation, public task, contract, consent and legitimate interests. Cookies are also covered by ePrivacy rules (Cookie Directive, 2009; ePrivacy Directive, 2002). A third-party request is a call from the page to another host. That is not the same as a third-party cookie.

Method

Webbkoll is a public scanner (5th of July Foundation, n.d.-c). It reports HTTPS, cookies, third-party requests and the server IP. It does not read a privacy notice, click a banner, or decide Article 6. The English interface was used. Figure 1 shows the check page. Each result is one live Chromium visit with no add-ons, no Do Not Track and no consent click (5th of July Foundation, n.d.-a, n.d.-b). The scan time is recorded with the result.

Server location is the Country field in KeyCDN IP Location Finder (KeyCDN, n.d.). Where no country was returned, the cell is marked not available. Norway is excluded from the country count. Internal cookies are set by the site. External cookies are set by other parties. Third-party requests count other

hosts contacted when the page loads. A site can contact many hosts without setting a third-party cookie. Table 2 is the first measurement. Table 3 is a repeat measurement. The two series are not averaged.

Figure 1
Webbkoll Start Page for klassekampen.no

Note. From *Webbkoll* [Screenshot], by 5th of July Foundation, n.d.-c (<https://webbkoll.dataskydd.net/en>). klassekampen.no is fifth-highest on third-party requests in Table 2 and is therefore used as the method example.

Findings

Table 2 records the first measurement on 20 August 2026. Table 3 records a repeat measurement the same day, with KeyCDN countries for third-party hosts on 21 August 2026. A later visit can differ because Webbkoll stores a result for 24 hours.

Seventeen of 18 sites set zero third-party cookies. The exception is ikea.no (two cookies) after redirect to ikea.com. Third-party requests in Table 2 range from 1 (lanekassen.no) to 113 (fotball.no). Figure 2 ranks those counts. Figure 3 shows each site's share of the total. Figure 4 groups the same counts by sector. News and media contact the most hosts. Government sites contact the fewest. Sport is high because of fotball.no. Shopping lies between those extremes. babyshop.no rises to 101 requests on the repeat measurement. Webbkoll cannot prove that a request contains personal data. It can only show that a host in that country was contacted (General Data Protection Regulation, 2016, art. 44-47).

Table 2

First Webbkoll Measurement of 18 Norwegian-Facing Services (20 August 2026)

Name of service	Sector	Server	Int.	Ext.	Req.	n countries	List of countries
xxl.no	Shopping	US	3	0	26	4	PL, IE, CA, SE
cdon.no	Shopping	CA	4	0	33	3	CA, US, SE
ikea.no	Shopping	CA	8	2	15	2	CA, US
babyshop.no	Shopping	CA	1	0	45	2	SE, US
skatteetaten.no	Government	CA	5	0	14	5	IE, SE, FR, GB, NO, CA
barnevernet.no	Government	NO	2	0	25	4	SE, DE, CA, NO, GB
altinn.no	Government	CA	0	0	5	1	US
lanekassen.no	Government	NL	0	0	1	1	DE
aftenposten.no	News / media	SE	5	0	48	5	SE, CA, US, DE, IE
nrk.no	News / media	SE	10	0	7	1	SE
netflix.no	News / media	GB	6	0	22	2	GB, CA
document.no	News / media	DE	4	0	51	6	US, CA, SE, FR, DE, FI
klassekampen.no	News / media	US	4	0	46	2	SE, US
spotify.no	News / media	US	3	0	10	2	SE, US
worldofwarcraft.com	News / media	IE	4	0	90	4	FR, SE, CA, US
dnt.no	Sport	GB	6	0	16	4	SE, CA, NL, FI
fotball.no	Sport	NL	8	0	113	5	SE, DK, CA, US, NL
skiforeningen.no	Sport	SE	1	0	14	3	NL, US, SE

Note. Int. = internal cookies; Ext. = external cookies; Req. = third-party requests; n countries = unique KeyCDN countries excluding Norway. Lists may still show NO when it appeared on the first worksheet; the count column excludes it. Service names follow the course list even when Webbkoll followed a redirect.

Table 3

Repeat Webbkoll Measurement (20 August 2026) and KeyCDN Third-Party Countries (21 August 2026)

Name of service	Sector	Server	Int.	Ext.	Req.	n countries	List of countries
xxl.no	Shopping	US	3	0	26	2	IE, US
cdon.no	Shopping	US	4	0	33	1	US
ikea.no	Shopping	US	8	2	15	1	US
babyshop.no	Shopping	n/a	1	0	101	2	IE, US
skatteetaten.no	Government	US	5	0	14	4	FR, IE, SE, US
barnevernet.no	Government	NO	2	0	25	4	DE, IE, SE, US
altinn.no	Government	n/a	0	0	5	1	US
lanekassen.no	Government	NL	0	0	1	1	DE
aftenposten.no	News / media	US	5	0	49	4	DE, IE, SE, US

Name of service	Sector	Server	Int.	Ext.	Req.	n countries	List of countries
nrk.no	News / media	SE	11	0	7	1	SE
netflix.no	News / media	US	6	0	22	1	US
document.no	News / media	DE	4	0	51	5	FI, FR, IE, SE, US
klasekampen.no	News / media	US	4	0	56	3	IE, SE, US
spotify.no	News / media	US	3	0	10	2	SE, US
worldofwarcraft.com	News / media	IE	4	0	92	3	IE, SE, US
dnt.no	Sport	n/a	6	0	16	5	FI, IE, NL, SE, US
fotball.no	Sport	NL	9	0	114	5	DK, IE, NL, SE, US
skiforeningen.no	Sport	US	1	0	14	3	IE, NL, US

Note. Table 2 is unchanged. babyshop.no is 101 versus 45; klasekampen.no is 56 versus 46. n/a means KeyCDN did not return a country (dnt.no, babyshop.no, altinn.no). Redirects were measured at the landing host.

Figure 2

Third-Party Requests for 18 Sites (Table 2)

Note. Compiled by the authors from Webbkoll results. Ranked on the Table 2 request column. Highest five start at fotball.no (113). Lowest five start at lanekassen.no (1).

Figure 3

Share of Third-Party Requests (Table 2)

Note. Compiled by the authors from Webbkoll results. fotball.no and worldofwarcraft.com together account for about one third of all recorded requests.

Figure 4

Third-Party Requests by Sector (Table 2)

Note. Compiled by the authors from Webbkoll results. Sector totals follow Table 2. News and media carry the most requests; government carries the fewest.

Highest and lowest third-party contact

The 18 sites are ranked on third-party requests in Table 2 (Figure 2). The rank is contact on load, not the external-cookie count. Table 4 lists the highest five and the lowest five. fotball.no contacts 113 hosts and still sets zero third-party cookies. A low cookie count can therefore coexist with a high request count. document.no has the widest first country list (six states, excluding Norway). lanekassen.no and altinn.no are the most restrained government fronts. The repeat measurement would place babyshop.no at 101 requests (Table 3). Rankings in this paper remain those of the first measurement.

Table 4

Highest Five and Lowest Five by Third-Party Request Volume (Table 2)

Rank	Name of service	Sector	Req.	n countries
Highest 1	fotball.no	Sport	113	5
Highest 2	worldofwarcraft.com	News / media	90	4
Highest 3	document.no	News / media	51	6
Highest 4	aftenposten.no	News / media	48	5
Highest 5	klassekampen.no	News / media	46	2
Lowest 5	skiforeningen.no	Sport	14	3
Lowest 4	spotify.no	News / media	10	2
Lowest 3	nrk.no	News / media	7	1
Lowest 2	altinn.no	Government	5	1
Lowest 1	lanekassen.no	Government	1	1

Note. Ranked on Table 2 requests. skatteetaten.no also has 14 requests; skiforeningen.no is listed because it has fewer countries (3 vs 5). document.no has the widest first country list (6). ikea.no remains the only third-party-cookie site (2 cookies).

Worked example: klassekampen.no

Figures 1, 5 and 6 show one full pass so the table rules can be checked. klassekampen.no is also Highest 5 in Table 4. Scan time: 12:36:46 UTC, 20 August 2026. Four first-party cookies and zero third-party cookies still came with 56 requests to 13 hosts, including Google advertising, Meta and Cookiebot. Missing HSTS, CSP and related headers concern integrity and confidentiality (General Data Protection Regulation, 2016, art. 5(1)(f), 25, 32). They do not decide the lawful basis. Privacy by design is both: how the page behaves, and why the controller may process the data. KeyCDN of the server IP is United States, Google (Figure 6).

Figure 5
Webbkoll Summary for klassekampen.no

Note. From *Webbkoll* [Screenshot], by 5th of July Foundation, n.d.-c (<https://webbkoll.dataskydd.net/en>). Scan time 20 August 2026, 12:36:46 Etc/UTC. HTTPS by default: yes. CSP not implemented. Cookies: 4 first-party, 0 third-party. Third-party requests: 56 to 13 hosts.

Figure 6
KeyCDN Look Up of the klassekampen.no Server IP

Note. From *IP Location Finder* [Screenshot], by KeyCDN, n.d. (<https://tools.keycdn.com/geo>). Look up of 2600:1901:0:25b9::.. Country: United States (US). Provider: Google LLC. The same tool on each unique third-party IP fills the country list.

Lawful basis for five services

A service does not have one lawful basis for everything it does. The controller must name a purpose, then name a basis for that purpose (Information Commissioner's Office, n.d.). The ICO lawful basis tool was applied to five notices (Information Commissioner's Office, 2026): skatteetaten.no, netflix.no,

fotball.no, document.no and babyshop.no. Each run states one concrete activity. Official ICO reports are dated 26 August 2026. Table 5 is the summary.

Article 6 is not a cookie click

Does a Yes/No banner decide whether the Tax Administration may process income data? No. Article 6 answers why personal data may be processed (General Data Protection Regulation, 2016, art. 6). Cookie rules answer whether information may be stored on a device (ePrivacy Directive, 2002). Mix the two in one ICO run, and the tool returns the wrong basis. For tax and the National Population Register, the notice says processing is required by law and is generally not optional (Norwegian Tax Administration, n.d.-a). The ICO report marks legal obligation and public task APPROPRIATE. Consent is NOT APPROPRIATE and likely invalid: the controller cannot offer a genuine free and ongoing choice for a statutory duty. Optional statistics cookies (Skyra, Matomo, Google Analytics, Siteimprove) are a different purpose. They use a Yes/No banner. A dedicated ICO run marks consent INCONCLUSIVE: the banner offers a choice, but the request does not fully name controller, purpose and types. No basis is APPROPRIATE for that cookie purpose.

The other four runs keep one purpose. Netflix needs account and payment data to provide the paid service (Netflix, 2026). Contractual necessity means the processing is needed to perform the agreement, not merely useful. ICO marks contract APPROPRIATE and consent as likely invalid: there is no real, ongoing choice if the service cannot be delivered without the data. Norges Fotballforbund publishes name and club of active players aged 13+ as match history, with opt-out through the club (Norges Fotballforbund, n.d.). ICO marks legitimate interests APPROPRIATE. Membership in FIKS may rest on contract. Cookiebot may rest on ePrivacy consent (ePrivacy Directive, 2002). Those are other purposes. Babyshop's sales terms are a purchase contract (Babyshop Sthlm Holding AB, n.d.). ICO marks contract APPROPRIATE for checkout. The notice does not label Article 6(1)(b). Marketing and cookies stay separate.

document.no is the case that fails the consent test. Google Signals is described as advertising analytics. Article 6 is not named (Document Media AS, n.d.). Collection is said to run only with a Google login and ad personalization. That looks like consent. The ICO report marks no basis APPROPRIATE. Consent is INCONCLUSIVE because a valid request must be clear, prominent and separate from other

terms. The choice sits in Google settings. Document Pluss terms also bundle acceptance of the privacy notice. Contract and legitimate interests are not appropriate for this advertising purpose. A notice may aim at consent and still fail the request.

Optional cookies after No

Webbkoll does not click banners (5th of July Foundation, n.d.-b). skatteetaten.no/person/ was opened in a clean browser and No was selected on 24 August 2026. That tests whether optional tracking is blocked after rejection. It is not the lawful basis for tax administration. Figure 7 shows the Tax Administration hub that separates the privacy notice from cookie settings, which is the same split used in Table 5.

Figure 7
Security and Privacy Hub on skatteetaten.no

Note. From the Tax Administration security and privacy hub [Screenshot], by Norwegian Tax Administration, n.d.-b (https://www.skatteetaten.no/en/about-the-norwegian-tax-administration/security-and-privacy/). Personvernerklæring and Informasjonskapsler are listed as separate destinations. The two ICO rows for skatteetaten.no follow that split.

Table 5
ICO Lawful Basis Summary for Five Selected Services

Service	Processing purpose (one)	Basis claimed in notice	ICO result	Match?
skatteetaten.no	Tax and registry administration (identity, income, tax data)	Legal obligation / processing required by law; opt-out generally not possible	Legal obligation and public task APPROPRIATE; consent NOT APPROPRIATE (likely invalid)	Yes
skatteetaten.no	Optional web statistics cookies	Consent (Yes/No banner)	Consent INCONCLUSIVE; no basis APPROPRIATE	Partial (separate run)

Service	Processing purpose (one)	Basis claimed in notice	ICO result	Match?
netflix.no	Account and payment data to provide paid streaming	EEA/UK: contractual necessity to provide the service to members	Contract APPROPRIATE; other bases NOT APPROPRIATE	Yes
fotball.no	Publishing player name and club for match history (13+)	Public-interest match history with club opt-out (LI in practice)	Legitimate interests APPROPRIATE; other bases NOT APPROPRIATE	Yes for this purpose
document.no	Google Signals / advertising analytics from site activity	Article 6 not named; Google login plus ad personalization; opt-out links	Consent INCONCLUSIVE; no basis APPROPRIATE	Partial
babyshop.no	Customer, delivery and payment data to complete a purchase	Not labeled as Article 6(1)(b); purchase data processed to fulfil orders	Contract APPROPRIATE; other bases NOT APPROPRIATE	Yes for checkout

Note. One processing purpose per ICO row. Official ICO reports dated 26 August 2026 (Information Commissioner's Office, 2026). Marketing, cookies and membership administration stay separate purposes where the notice uses other bases.

Conclusion

The scan and the law answer different questions. On third-party requests the highest five are fotball.no, worldofwarcraft.com, document.no, afterposten.no and klassekampen.no. The lowest five are lanekassen.no, altinn.no, nrk.no, spotify.no and skiforeningen.no. ikea.no is the only third-party-cookie row. Four of five core purposes match the notice (Table 5). Two consent tests fail: optional cookies on skatteetaten.no (controller, purpose and types not fully named) and Google Signals on document.no (the request is not clear, prominent and separate). A legal duty to assess tax is not a cookie click. One purpose requires one basis.
